TESTIMONIALS

STEFAN LESICNIK "Thanks Smile Club and their Active Aligners for the confidence"

ZANDISILE KHUZWAYO "Never thought I would be able to fix my teeth as affordably and as easily as this."

MARTIN KRUGER " 4 months ago I had bad teeth. Now I don't. No Braces. Able to eat peanut butter. And unbelievably happy with the outcome!"

love your smile

Get Started in 3 easy steps

Your Active Aligners Professional will arrange a 3D scan or have impressions taken to determine candidacy

Once your treatment plan and simulated best or optimal smile is approved by your dental professional, your Active Aligners will be manufactured and ready to collect in approximately 2 weeks.

On completion of your Active Aligners Journey, be sure to wear your retainers, included in your package, to ensure your new smile lasts forever.

WHAT ARE ACTIVE ALIGNERS?

Active Aligners are known in the dental industry as clear aligner therapy, which are custom trays worn in sequence that move your teeth in stages. Think "invisible braces". They work by gradually shifting teeth into their optimal position, making your teeth straighter. This is achieved through wearing a series of aligners, each for 22 hours a day, 2 weeks at a time (one stage), which move the teeth up to 0.3mm per stage until their optimal alignment has been reached. Often Active Aligners are referred to as transparent braces, or clear braces, as they are made from transparent FDA Approved material. This means you will be able to wear them without people noticing.

AM I A CANDIDATE?

CROOKED / CROWDED

OVERBITE

SPACING / GAPS

UNDERBITE

ROTATED TEETH

OPEN BITE

ACTIVE ALIGNERS

Teen

Clear aligners work on basic orthodontic principles. They are used for the correction of crooked teeth, gaps or rotation. Only fully erupted permanent dentition (no primary or erupting dentition). Young teens qualify if all their adult teeth have erupted.

WHY CHOOSE ACTIVE ALIGNERS?

- Final Smile outcomes are more predictable thanks to the use of CAD (Computer Aided Design) and individualised treatment planning
- Recent studies have shown that aligner treatment is usually faster than braces
- More flexibility in food choices allowing for healthy eating habits to be maintained
- No cutting of lips or cheeks by brackets - more comfortable
- Allows for better and more convenient oral hygiene, plaque control (limits the risk of white spots and gingival inflammation), periodontal health (less irritation in soft tissue) and overall comfort
- Transparent - allows for self-confidence
- Fewer emergencies if compared to traditional braces - no need to miss work due to broken appliances or injury during contact sport
